GAIN Report #GM1018

Germany

Oilseeds and Products

Annual

2001

Approved by:

Peter O. Kurz

U.S. Embassy

Prepared by:

Sabine Lieberz

Report Highlights:

Rapeseed production in 2001 is expected at 3.8 mio MT (compared to 3.6 mio MT in 2000). One mio MT thereof is grown on set-aside land (326 000 ha) for non-food purposes, and will mainly (80 %) be used for biodiesel production.

Due to low prices the import of palm oil and coconutoil has continued to increase substantially. Imports of soybeans and soybean meal decreased by 12 percent and 8 percent respectively in CY 2000 but are expected to rise again in CY 2001.

GMO discussion is a major influence on prices and choice of varieties to be imported.

Includes PSD changes: Yes

Includes Trade Matrix: Yes

Production

The most important oilseed produced in Germany is rapeseed (97 %) followed by sunflowerseed (2.5 %). Domestic production of soybeans is negligible. The restrictions concerning production area imposed by the Blair House- Agreement were observed, both in the EU and in Germany, thus no compensatory reductions were applied to the subsidies.

In MY 2000 rapeseed production in Germany dropped by 16 % to 3.6 mio metric tons (MT), due to a 10 % reduction in area (to 1,078 mio ha) and smaller yields per hectare as a consequence of unfavorable weather conditions (too dry in spring, too wet at harvest). The reduction in area had to be expected, as in Agenda 2000 oilseed payments are gradually reduced while grain payments are increased in order to eventually meet at the same level. However, as prices for rapeseed are increasing more quickly than those for grains for MY 2001, the area has been increased about 7 % again to 1,156 mio ha. For the 2001 harvest a crop of 3.8 mio MT is predicted.

Consumption

The use of animal meals for ruminants has been forbidden in the EU for several years. In the course of the BSE crisis, the EU extended this ban in December 2000 to all animals except fish, which may still be fed with fish meal. As of April 13, 2001 fishmeal is allowed again as a feed component for pork and poultry, but may still not be used for ruminants. However, since the rules for using fishmeal are rather complicated (e.g. compound feed containing fish meal may only be used by farms that hold no ruminants at all) fish meal so far has hardly been re-introduced to compound feed mixtures, not even for pig and poultry meat production.

Processed animal protein in compound feed mixtures is best replaced by soybean meal. Therefore, on a short-term basis an additional need of 400,000 MT soybean meal per year is predicted.

The high prices for fossil diesel fuel make biodiesel more competitive. The growing demand for industrial consumption can no longer be met by production on set-aside land alone. Thus, a growing share of food rapeseed is being used for biodiesel production and other industrial uses.

Trade

Given the limited domestic production Germany heavily relies on imports, mainly from the US and Brazil. However, a substantial amount of these imports are transshipped through the Netherlands.

In CY 2000 Germany imported a total of 5.7 mio MT (CY 1999: 6.3 mio MT) of oilseeds, of which more than half consisted of soybeans (3.8 mio MT down 12 % from 4.4 mio MT in CY 1999), followed by rapeseed (CY 1.4 mio MT up 7 % from 1.3 mio MT in CY 1999). The increase in rapeseed imports can be attributed partly to the lower domestic crop in CY 2000 and partly to the fact that major manufacturers of margarine have exchanged rapeseed for soybeans in the course of the GMO-discussion.

The import of oilmeals amounted to 3.3 mio MT (3.4 in CY 1999). Again soybean meal made up the largest share (1.8 mio MT in CY 2000 down 8 % from 2 mio MT in CY 1999). For CY 2001 an increase in soybeanmeal imports is expected (see above).

The import of total oils rose from 1.1 mio MT in CY to 1.3 mio MT in CY 2000. The main imported oils are palm oil (504,711 MT in CY 2000, up 21 % from 415,514 MT in CY 1999) and coconutoil (320,257 MT in CY 2000 up 59 % from 201,550 MT in CY 1999). Import of rapeseed oil has more than doubled to 120,545 MT in CY 2000 from 51,910 MT in CY 1999.

Prices are highly influenced by the \$/Euro-exchange rate which let to substantial price increases for soybeans and soybean meal. However, the market is split by the GMO-discussion. The Starlink affair and various other food scandals have fueled the food safety and consumer protection discussion enormously. Manufacturers try to be on the safe side and ask for "GMO-free"-certificates. As these are difficult to issue because of the unsolved threshold question, prices for guaranteed GMO-free commodities are by far higher than for (maybe) GMO-containing goods or origins.

Section II: Statistical Tables

The following section includes PSD's, price tables, trade matrices and additional tables.

Note: Prices in tables after PSD's are in US\$ and indicate simple average monthly import prices for imported commodities recorded in the PSD's without discriminating between high-priced or low-priced products.

Note: A "--" means no data entry.

Note: Trade data in PSD's correspond to the market year indicated. However, calendar year (CY) imports and exports (for reference) at the end of each PSD table (after TOTAL DISTRIBUTION) correspond to the indicator year on top of each table.

Note: Minor differences as a result of rounding may occur.

Note: In recent years the U.S. dollar/German mark exchange rate has been as follows:

1991: \$1 = DM 1.66;	1996: \$1 = DM 1.50;
1992: \$1 = DM 1.52;	1997: \$1 = DM 1.70;
1993: \$1 = DM 1.65;	1998: \$1 = DM 1.76;
1994: \$1 = DM 1.61;	1999: \$1 = DM 1.75;
1995: \$1 = DM 1.43;	2000: \$1 = DM 2.12.

The fixed exchange rate Euro (€)/German mark is: € 1 = DM 1.95583

Further exchange rates (5/29/2001) are:

US Dollar/German mark:	US \$ 1 = DM 2.29,
€ /US dollar:	€ 1 = \$ 0.85 ,
US dollar/€ :	\$ 1 = € 1.1708.
